MAGNETOM Terra – Translate 7T research power into clinical care

MAGNETOM Terra is designed to let you explore new territories in MRI by enabling powerful 7T research and enhancing clinical care. Uncover a whole new world of clinical insights with double SNR for more precision. Our advanced ultra-high-field (UHF) technology will keep you at the cutting edge of MRI, to attract the brightest minds to your facility, sharpen your competitive edge and strengthen your reputation. It delivers a fertile platform for unlocking research capabilities, publishing new insights first, and setting the pace in diagnostic imaging. Welcome to an exclusive research community. Welcome to a whole new world in MRI.

Welcome to clinical 7T.

MAGNETOM Terra – Translate 7T research power into clinical care

Unique Dual Mode functionality

- Uncover a whole new world of clinical knowledge with the flexibility to get more from your scanner
- Secure switch between research and clinical operation in less than 7 minutes
- Operating with 2 separate databases for clear research and clinical distinction

80/200 gradients, 8-channel pTX and up to 64 channels

- More power for greater diffusion MRI and functional MRI with 80/200 gradients
- Higher homogeneity for challenging body regions with 8-channel parallel transmit (in research mode)
- Higher acceleration factors with 64 receive channels

50% lighter 7T magnet technology

- First 7T scanner released for clinical use
- Lower weight and cold-shipment for easier integration in clinical environments
- Reduced operating costs thanks to Zero Helium boil-off

Double SNR for more precision

- 0.2 mm in-plane resolution to visualize previously unseen structures
- 0.14 cm^3 voxel sizes for metabolic brain mapping[1] (in research mode)
- Submillimeter BOLD fMRI precision to visualize sub-cortical activations

> 70% global market share in 7T technology

- Over 70% of 7T and 100% of vendor-integrated > 7T MRI human scanners worldwide from Siemens
- 8 of 11 leading U.S. hospitals with a 7T, (2016–2017), trust Siemens when they decide for 7T investment[3]
- 74% of ISMRM UHF abstracts in 2017 were based on data from Siemens UHF systems[3]

The world's largest UHF community

- Largest installed base for exchanging ideas in a strong collaborative network
- An opportunity to enhance your reputation and competitiveness
- Incentive for the brightest minds in the MRI community to work with you

Uncover a whole new world of clinical insights

Discovering new ground in MRI can help you significantly enhance patient outcomes. Imaging at 7T offers more than double the SNR of 3T. This delivers potential for better lesion conspicuity, faster image acquisition to reduce motion artefacts, and earlier disease detection at submillimeter resolution. MAGNETOM Terra is the first 7T scanner released for clinical use. Its Dual Mode lets you switch between clinical and research tasks, unlocking new opportunities and providing a solid, well-founded platform for innovative results.

"Based on higher resolution, 7T provides new insights into gray and white matter disease in the brain, such as multiple sclerosis, focal cortical dysplasia, and hippocampal sclerosis. Furthermore, functional MR benefits from 7T based on a clinically relevant increase in functional sensitivity and specificity. In musculoskeletal imaging, 7T enhances the visualization of small joint structures and subtle pathologies, such as small meniscal tears, triangular fibrocartilage lesions, and early stages of cartilage degeneration."[4]

Professor Siegfried Trattnig
Director of the MR Centre of Excellence,
MedUni Wien, Vienna, Austria

Uncover a whole new world of clinical insights – Double SNR for more precision with clinical applications in Dual Mode

Dual Mode flexibility

MAGNETOM Terra[7] is the first 7T scanner released for clinical use. With selected neurological and musculo-skeletal scan protocols, it has potential to uncover a whole new world of clinical care. Its unique Dual Mode functionality lets you switch between research and clinical operation, giving you flexibility to get more from your scanner.

Ultra-fine anatomical resolution

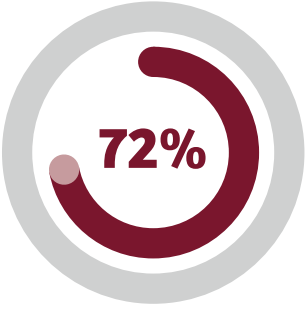
In brain and musculoskeletal MRI, 7T reveals details previously unseen at lower field strengths. For example, cerebral cortex imaging at 0.2 mm in-plane resolution may detect changes in cortical structure indicating early dementia. It also helps visualize cortical microinfarcts and plaques in MS patients and delivers insight into the plaque-vessel relationship and iron accumulation.

Submillimeter fMRI

The BOLD contrast increases linearly with field strength. In clinical use, this could mean higher precision in oncology compared to 3T applications, for example, through smaller voxel sizes. Potentially, this can increase the accuracy of neurological pre-surgical evaluation of eloquent areas before tumor removal, while keeping scanning times viable[2].

Powerful image reconstruction

MAGNETOM Terra delivers improvements in workflow for easier operation and better patient handling. Leveraging the latest *syngo* MR E11 software platform, it lets you work in the same way as you do with cutting-edge 3T technology. What's more, it comes with the most powerful MaRS (Measurement and Reconstruction System) computing technology ever built.[6]



8 of 11 leading U.S. hospitals with a 7T, (2016–2017), trust Siemens when they decide for 7T investment[3]

Switch between research and clinical tasks with **Dual Mode**

Ultra-fine resolution to visualize details previously unseen

Submillimeter **BOLD** fMRI precision for pre-surgical evaluation

Ultra-fast image reconstruction[6] and ***syngo*** **MR E11**

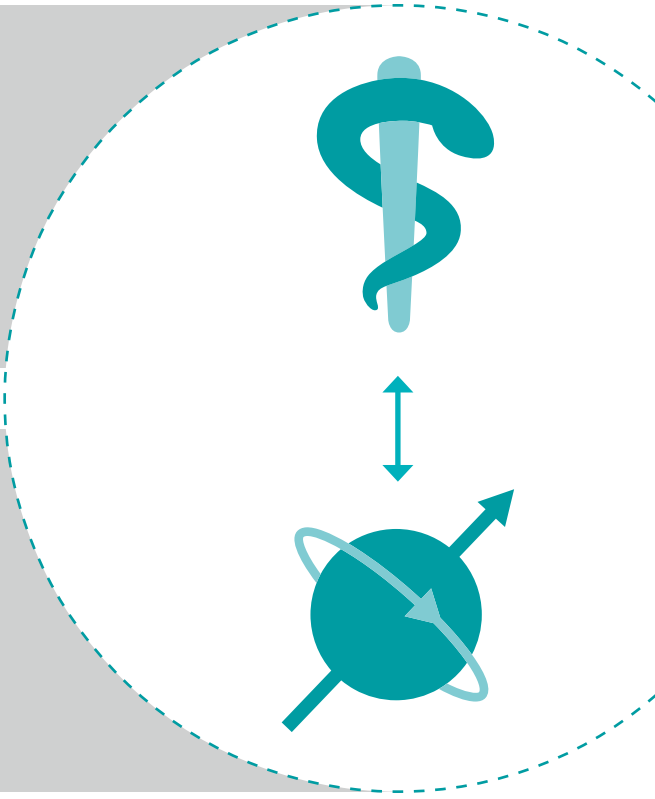
Dual Mode offers the flexibility to switch from research to clinical tasks

Clinical Mode

- 1 transmit channel
- 11 kW RF power
- 2 coils (Head 32, Knee 28)
- Neuro and MSK optimized clinical applications

Research Mode

- single channel and 8-channel parallel transmit
- 8 x 2 kW RF power
- Wider range of RF coils
- Whole-Body WIP Applications



- *syngo* MR E11 software line
- XR Gradients 80/200
- Up to 64 receive channels[2]
- Latest MaRS computer
- 3rd order shims

Max Planck Institute, Leipzig, Germany

Change the game in UHF business

Medical research funding has stagnated in the last decade. Ensuring your high-end MRI endeavors have the right business impact is crucial in today's competitive environment. MAGNETOM Terra is the result of over 25 years of Siemens UHF innovations, culminating in the design of a brand-new, volume-produced 7T magnet. The magnet is 50% lighter than previous generations and supports easier integration into clinical environments. MAGNETOM Terra[7] can help you become more competitive, while making a tangible difference to clinical care, research – and your business.

"When you talk to other people in the field, it is clear that Siemens has by far the greatest expertise in ultra-high-field imaging."[4]

Professor Rainer Goebel
University of Maastricht & scannexus, Maastricht, The Netherlands

Change the game in UHF business with Siemens Healthineers' 50% lighter 7T magnet

Innovative magnet technology

Siemens Healthineers' 7T magnet is a milestone in MR magnet technology. Its unique design and thermally balanced materials minimize physical interactions between core components. The result is 50% lighter than previous generations, with a higher structural stability and a greater fundamental stress capacity. In addition, excellent homogeneity makes for enhanced image quality.

Easy clinical integration

Thanks to the lighter magnet, the scanner can be shipped cold via airfreight. What's more, you benefit from up to 50% faster installation time and ramp-up. Zero Helium boil-off translates into lower lifecycle costs and an improved eco-footprint. All this has the potential to enhance performance, lower resource consumption, improve sustainability, and reduce operating costs.

Increased competitiveness

MAGNETOM Terra[7] can help you broaden research funding opportunities, making your institution stand out as a leader in life sciences. By being at the cutting edge of clinical care and research, you have the opportunity to increase competitiveness for grants, benefit from reduced complexity in clinical trials, and open up potential for clinical imaging reimbursements.

Forward-looking technology

An investment in MAGNETOM Terra[7] is an investment in the future. Siemens is committed to serving the ultra-high-field community – today and tomorrow – with a host of outstanding innovations. From development and production, to service – all of MAGNETOM Terra's[7] key components are delivered from a single reliable partner you can trust, for maximum peace of mind.

April 2015 – Installation of Siemens' first 7T magnet

During the 30 years that we have been producing 1.5T and 3T magnets, we have gained extensive engineering skills and well-founded process expertise. This knowledge and experience has led to the development and production of our own 7T magnet.

Universitätsklinikum Erlangen, Germany

"We are extremely proud at Siemens Magnet Technology to have developed the 7T magnet at the heart of the MAGNETOM Terra. Once again our expert design and process teams have demonstrated how their innovative thinking has led to a product that has pushed forward the boundaries of magnet technology. It is wonderful to see how seamlessly the manufacture of this flagship product has already been integrated into our award winning facility."

Ralph Seidler
Managing Director,
Siemens Magnet Technology

Unlock research beyond clinical limits

When it comes to research, the freedom to push the boundaries is imperative for gaining a competitive edge. For neuroscience and clinical research applications, MAGNETOM Terra delivers ultra-high SNR and 8-channel pTX for imaging challenging body regions. In addition, it has up to 64 receive channels for higher acceleration factors and 80/200 gradients for maximum flexibility. Moreover, this powerful, reliable scanner supports basic research by helping you develop groundbreaking technologies, set new trends and translate your outcomes into clinical routine.

"The increased spatial resolution offered by 7T MRI enables us to study fine-grained activation patterns within cortical areas and investigate detailed functional topography of the cerebral cortex in individual human subjects. This will provide us with a deeper understanding of the human brain and its connectomics in healthy and diseased populations."[4]

Professor Kamil Ugurbil
Director of the Center for Magnetic Resonance Research (CMRR),
Minneapolis, Minnesota, USA

Unlock research beyond clinical limits with 8-channel parallel transmit

Enhanced images with pTX

Image quality and speed are key, but inhomogeneities may present challenges, for example, in body MRI. MAGNETOM Terra's 8-channel pTX technology helps you overcome these issues and generate images of excellent quality. This particularly promising technology has the potential to support your own hardware developments.

Ultra-high resolution spectroscopy

Proton magnetic resonance spectroscopy at 7T not only delivers metabolic information, but also gives accurate anatomical insight. Ultra-high 0.14 cm^3 resolution has the potential to reveal valuable new diagnostic information for clinical applications – including patients with tumors, epilepsy, multiple sclerosis or other neurodegenerative diseases.

More power for your research

MAGNETOM Terra offers a host of cutting-edge research functionalities, providing access to works in progress packages and powerful hardware configurations. 80/200 gradients and up to 64 receive channels deliver enhanced capabilities for your studies. What's more, the scanner gives you the freedom to explore and develop new clinical applications only possible at ultra-high-field strengths.

Open platform architecture

MAGNETOM Terra provides a flexible, fertile ground for your own UHF hardware and software developments. For example, Siemens collaboration partners benefit from technical support and direct access to the sequence, the Image Calculation Environment (ICE), and imaging protocols.

Join the largest research community

Your reputation plays a pivotal role in your institution's success. MAGNETOM Terra has the power to let you go deeper than ever before, making your research and patient outcomes stand out from the rest. What's more, this leading-edge technology can help you attract the brightest minds to your facility, further enhancing your capabilities. MAGNETOM Terra has the potential to put your organization firmly on the map, offering access to an exclusive network of expertise and broad scope for collaboration and exchange.

"When we were in a position to order a 7T system, Siemens was the logical choice."[4]

Professor Peter Jezzard
Professor of Neuroimaging,
University of Oxford, Oxford, UK

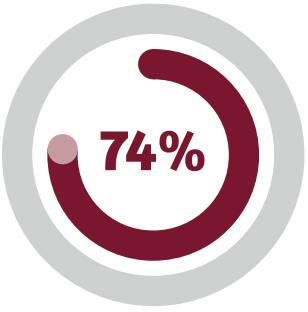
Join the largest research community with over 70% of all UHF users

Enhance your reputation

MAGNETOM Terra helps you achieve your research goals, giving you the opportunity to publish first and become a true opinion leader. This advanced technology has the potential to strengthen your position by attracting the brightest brains to your facility. The scanner lets you deliver previously unseen insights that could improve patient outcomes and further enhance your reputation.

Expand your network

Even if you are taking your first steps in ultra-high-field imaging, you will never be alone. Siemens has proven expertise in UHF MRI and cultivates links with an extensive network of users. As a result, you benefit from the experience of others and can share your own ideas. Siemens is the global leader in 7T – with a market share of over 70% and more than 25 years of experience in this field.



74% of ISMRM UHF abstracts in 2017 were based on data from Siemens UHF systems.[2]

Exchange your ideas with peers

When you become part of the Siemens UHF community, you join an exclusive group of outstanding MRI experts. Through collaboration and exchange with other leaders in your field, you can extend your own knowledge and gain deeper insights. Siemens' regular user meetings and an online discussion board are the ideal platforms to interact with your peers.

Over **70%** of 7T scanners deployed worldwide are from Siemens

Attract and retain the brightest minds and **publish first**

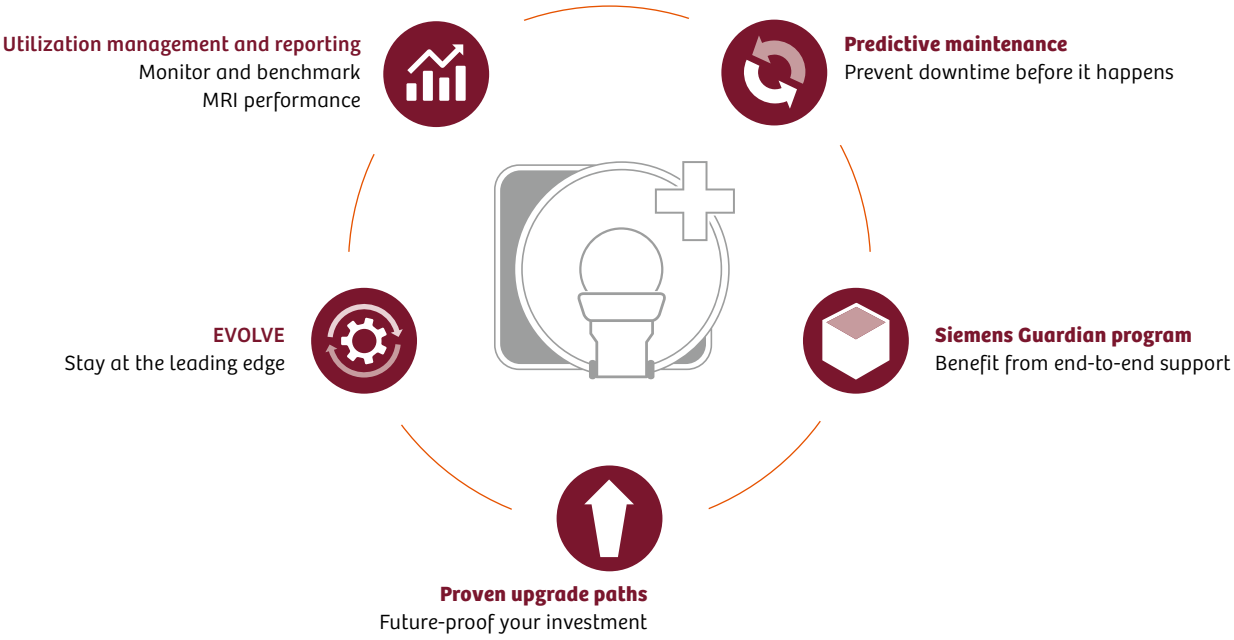
Service and exchange – Comprehensive services



Siemens' end-to-end services ensure you stay at the leading edge of MRI technology throughout the entire system lifecycle – from installation, to operation, to upgrades, to ongoing support. Moreover, our diverse communication platforms and communities keep you up to speed on the world of MRI and enable you to share your ideas and experiences with your peers.

Utilization management and reporting
This powerful solution gives you more from your MRI scanner. It allows you to monitor KPIs and benchmark your system against other Siemens MRI machines at any facility or organization. So you can keep track of your MRI performance, and reap the maximum reward from your scanner.

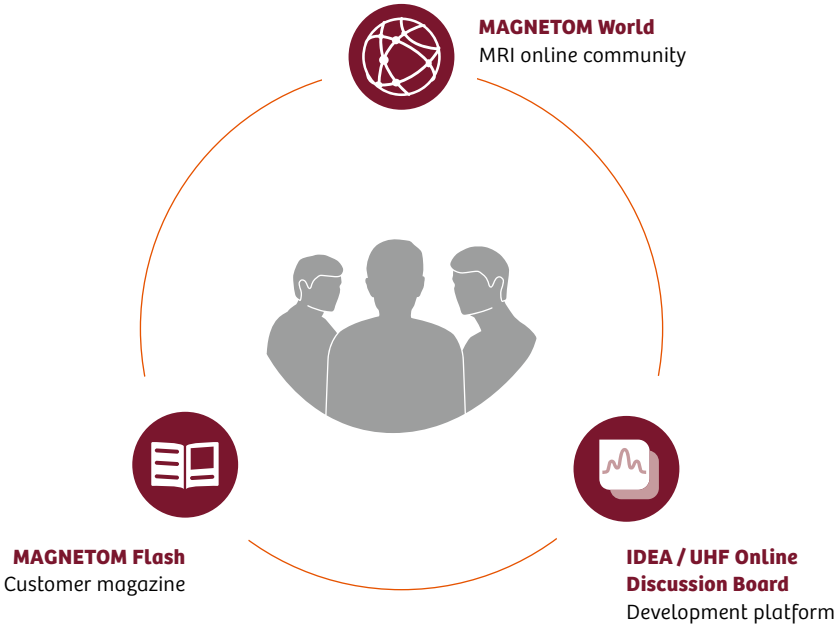
Predictive maintenance
When systems go down, it impacts both your ability to care for your patients and your bottom line. Siemens provides a predictive maintenance service to help you minimize lost time. It informs you when a part of your MRI system is likely to fail, enabling you to plan repairs and prevent downtime before it happens.

EVOLVE
Keep your hardware and software up to date at all times – a key factor in enhancing performance and diagnostic quality. You receive all applicable upgrades for software and the *syngo* OS, plus at least one workstation hardware upgrade within the first six years.

Siemens Guardian program
This program provides the latest service technology so you can better manage your MRI system. It combines many features in a single package – offering real-time system monitoring, expert advice to improve workflow efficiency, proactive maintenance, and support. Moreover, it guarantees defined repair times, giving you complete peace of mind.

Proven upgrade paths
With MAGNETOM scanners, taking your MRI system to the next level is simplicity itself, thanks to clearly defined upgrade paths. In fact, Siemens has built an entire organization (CDV) to help customers truly maximize their system life – and increase their return on investment.

Service and exchange – Peer-to-peer information



On MAGNETOM Flash:
"An excellent and useful combination of technological and clinical articles that both keep one up to date with advances in MRI and provide practical assistance for day-to-day practice – good and interesting learning material."[4]

Mark Lourensz
St Vincent's Hospital, Fitzroy, Victoria, Australia

MAGNETOM World
Siemens Healthineers' global MRI community offers peer-to-peer support and information. Radiologists, cardiologists, technologists, and physicists have all contributed with publications, presentations, training documents, case studies, and more – all freely available to you via this unique network. Plus, the bi-annual MAGNETOM World Summit is the ideal opportunity to share and exchange ideas.

MAGNETOM Flash
Published quarterly, the MR customer magazine features up-to-date clinical case studies, application tips and technical and product information relevant to you. All content is carefully compiled by experts to meet the needs of today's MRI users in both clinical and research scenarios. In fact, 98.5% of readers report that MAGNETOM Flash is clinically relevant.

IDEA / UHF Online Discussion Board
IDEA[7] is an open development platform for the largest and most active 3T and UHF research communities in the world. It unites users from across the globe and fosters innovation in the field of MRI. Members collaborate online at www.mr-idea.com and at an annual meeting. IDEA includes an exclusive area, the UHF Online Discussion Board, to help users focus on topics of interest, as well as find and communicate with the right peers.

Technical specifications

MAGNETOM Terra **Technical specifications**	
Field strength	7 Tesla
Bore size	60 cm
Magnet length	270 cm
System length[8]	297 cm
System weight (in operation)[8]	< 25 tons
Minimum room size[8]	65 m^2 / (w/o pTX and 3rd order shim option)
Dual Mode functionality	Clinical Mode Research Mode
RF transmit	TimTX-1, TimTx-8 (in research mode)
RF receive	Tim [32 x 32] [64 x 64]
Gradient strength	XR gradients (80 mT/m @ 200 T/m/s)
Helium consumption	Zero Helium boil-off technology
Quiet Suite/DotGO	Available in research mode
Local coils in clinical mode	1TX/32RX head coil 1TX/28RX knee coil

Why Siemens Healthineers?

At Siemens Healthineers, our focus is to help healthcare providers succeed in today's dynamic environment.

Healthcare providers around the world have long relied upon our engineering excellence – leading-edge, high-quality medical technologies across a broad portfolio. Our technologies touch an estimated 5 million patients globally every day.[10] At the same time, they help hospital departments to continuously improve their clinical, operational, and financial outcomes.

We now consolidate this unprecedented volume of data and insights and turn them into pioneering enterprise and digital health services. With those, we maximize opportunities and share risk for the success of your entire health system.

Partnerships are built on people. With Siemens Healthineers, there is no team more committed and more connected than we are to realize your success together.

Siemens Healthineers.
Engineering success. Pioneering healthcare. Together.

Not for distribution in the USA. On account of certain regional limitations of sales rights and service availability, we cannot guarantee that all products included in this brochure are available through the Siemens sales organization worldwide. Availability and packaging may vary by country and are subject to change without prior notice. Some/All of the features and products described herein may not be available in the United States. Some products are still under development and not commercially available yet. Their future availability cannot be ensured. The information in this document contains general technical descriptions of specifications and optional features which do not always have to be present in individual cases. Siemens reserves the right to modify the design, packaging, specifications, and options described herein without prior notice. Please contact your local Siemens sales representative for the most current information.
